AVOCADO

Variety/Type Descriptions

Persea Americana – They have greenish or yellowish flesh with a buttery consistency and a rich, nutty flavour. The fruit is exceedingly variable in size, no larger than a hen's egg sometimes weighing 1–2 kg (2–4 pounds). The form varies from round to pear-shaped with a long, slender neck, and the colour ranges from green to dark purple.

COCOA BEANS (CRIOLLO ARRIBA)

Variety/Type Descriptions

Theobroma Cacao L. Family Sterculiaceae - are the seeds, contained in a cucumber-like fruit, of the cacao tree. The yellowish, reddish to brownish fruits (botanically speaking, berries), which are of similar appearance to cucumbers, are divided into five longitudinal compartments, each containing up to 10 seeds (cocoa beans). As the fruits approach ripeness, the partitions break

down and the seeds are located around the central funicle in a whitish pulp with a sweet/sour flavor.

COFFEE

Variety/Type Descriptions

Coffea Spp (Rubiaceae) - Robusta coffee tastes earthy and is often said to have a bitter, rubbery/grain-like flavor, with a peanutty aftertaste. Robusta coffee beans contain more caffeine and less sugar than arabica beans, and therefore taste stronger and harsher than Arabica. Exclusively high-quality **Arabica** is beautifully fragrant, sweet and round, with a slight and pleasant acidity.

DRAGON FRUIT (PITAHAYA)

Variety/Type Descriptions

Hilosereus Undatus –The fruits are oval to oblong in shape, weighing about 8-12 ounces and averaging 10-15 centimeters in length. They have a pink or magenta peel with green scale-like leaves, and white flesh that is dotted with tiny edible black seeds, similar to a kiwi. The juicy, spongy yet dense pulp offers a subtle sweet flavor with notes of berry, pear, kiwi, and watermelon, sometimes with just a hint of sourness.

Variety/Type Descriptions

Ficus Carica– is a soft, sweet fruit. Its skin is very thin and has many small seeds inside of it. Seeds may be large, medium, small or minute and range in number from 30 to 1,600 per fruit. It may be obovoid, turbinate, or pear-shaped, 1 to 4 in (2.5-10 cm) long, and varies in color from yellowish-green to coppery, bronze, or dark-purple. It is juicy and sweet when ripe, gummy with latex when unripe.

GUAVA

Variety/Type Descriptions

Psidium Guajava – The fruit is roughly spherical with a furrowed smooth surface. The most alluring element of a Guava is its fragrance, a bouquet of bright tropical aromatics. The flesh is unique to many fruits, its texture a combination of a firm banana with the succulence of an apple. Tiny edible seeds pattern the flesh's core. The flavor of Guava is a reflection of its aromatics, though more subtle with notes of pineapple, papaya, banana and lemon

PALMETTO (HEART OF PALM)

Variety/Type Descriptions

Chamaerops Humilis – or heart of palm is a vegetable harvested from the inner core and growing bud of certain palm trees. The palmetto is white, soft with a flexible texture, rich in fibers. It has a very special subtle flavor, crunchy and compact, but at the same time soft. Heart of palm may be eaten on its own, and often it is eaten in a salad.

PAPAYA

Variety/Type Descriptions

Carica Papaya – common commercial cultivars generally produce fruits that weigh 0.5 to 2.25 kg (1 to 5 lbs)—and have a thin but tough waxy skin. Green fruits contain latex, which disappears as the fruit ripens to light or dark yellow. The flesh of the fruit varies from yellow to orange to red, and is thick and juicy, with a central cavity filled with many small black seeds. Papayas, which are high in vitamins A and C and calcium,

are often used fresh in fruit salads and desserts, as well as prepared in juices and jams or dried.

PASSION FRUIT (MARACUYA)

Variety/Type Descriptions

Passiflora Edulis – also known as passion fruit is a pepo, a type of berry, round to oval. The outside color of the berry ranges from dark-purple with fine white specks to light yellow either yellow or dark purple at maturity, with a soft to firm, juicy interior filled with numerous seeds. The fruit is 4-7.5 cm in diameter; purple fruits are smaller, weighing around 35 grams, while yellow fruits are closer to 80 grams. The smooth, leathery rind is 9–13 mm thick, including a thick layer of pith. Within the berry, there are typically 250 black seeds, each 2.4 mm in length.

Each seed is surrounded by a membranous sac filled with pulpy juice. The flavor of the juice is slightly acidic and musky.

PLANTAIN

Variety/Type Descriptions

Musa X Paradisiaca – Plantains contain more starch and less sugar than dessert bananas, therefore they are usually cooked or otherwise processed before being eaten. They are always cooked or fried when eaten green. At this stage, the pulp is hard and the peel often so stiff that it has to be cut with a knife to be removed.

SOURSOP

Variety/Type Descriptions

Annona Muricata – The fruit is more or less oval or heart-shaped, sometimes irregular, lopsided or curved. The size ranges from 4 to 12 in (10-30 cm) long and up to 6 in (15 cm) in width, and the weight may be up to 10 or 15 lbs (4.5-6.8 kg). The fruit is compound and covered with a reticulated, leathery-appearing but tender, inedible, bitter skin from which protrude few or many stubby, or more elongated

and curved, soft, pliable "spines". The skin become slightly yellowish-green when it is mature and the fruit is soft to the touch. Its inner surface is cream-colored and granular

***Call for quote at your destination**

Variety/Type Descriptions

Manihot Esculenta – The starchy flesh of the yuca root is a light white or cream color with a grainy texture similar to potatoes. The meaty flesh is often described as having a mild, sweet, somewhat nutty taste. Yuca is high in carbohydrates and low in saturated fat, cholesterol and sodium. It is a good source of manganese and vitamin C. You can prepare it in the same way you would a baked potato, though it's important to remove the skin first.
