Ceiba International Group LLC

AVOCADO

Variety/Type Descriptions

Persea Americana – They have greenish or yellowish flesh with a buttery consistency and a rich, nutty flavour. The fruit is exceedingly variable in size, no larger than a hen's egg sometimes weighing 1–2 kg (2–4 pounds). The form varies from round to pear-shaped with a long, slender neck, and the colour ranges from green to dark purple. It has a black peel 1

COCOA BEANS (CRIOLLO ARRIBA)

Variety/Type Descriptions

Theobroma Cacao L. Family Sterculiaceae - are the seeds, contained in a cucumber-like fruit, of the cacao tree. The yellowish, reddish to brownish fruits (botanically speaking, berries), which are of similar appearance to cucumbers, are divided into five longitudinal compartments, each containing up to 10 seeds (cocoa beans). As the fruits approach ripeness, the partitions break down and the seeds are located around the central funicle in a whitish pulp with a sweet/sour flavor.

COFFEE

Variety/Type Descriptions

Coffea Spp (Rubiaceae) - Robusta coffee tastes earthy and is often said to have a bitter, rubbery/grain-like flavor, with a peanutty aftertaste. Robusta coffee beans contain more caffeine and less sugar than arabica beans, and therefore taste stronger and harsher than Arabica. Exclusively high-quality **Arabica** is beautifully fragrant, sweet and round, with a slight and pleasant acidity.

DRAGON FRUIT (PITAHAYA)

8

Variety/Type Descriptions

Hilosereus Undatus –The fruits are oval to oblong in shape, weighing about 8-12 ounces and averaging 10-15 centimeters in length. They have a pink or magenta peel with green scale-like leaves, and white flesh that is dotted with tiny edible black seeds, similar to a kiwi. The juicy, spongy yet dense pulp offers a subtle sweet flavor with notes of berry, pear, kiwi, and watermelon, sometimes with just a hint of sourness.

GUAVA

Variety/Type Descriptions

Psidium Guajava – The fruit is roughly spherical with a furrowed smooth surface. The most alluring element of a Guava is its fragrance, a bouquet of bright tropical aromatics. The flesh is unique to many fruits, its texture a combination of a firm banana with the succulence of an apple. Tiny edible seeds pattern the flesh's core. The flavor of Guava is a reflection of its aromatics, though more subtle with notes of pineapple, papaya, banana and lemon.

JACKFRUIT

Variety/Type Descriptions

ARTOCARPUS ALTILIS At full maturity, Jackfruit can measure up to 80 centimeters long and 50 centimeters wide, and can weigh anywhere from 10 to 50 pounds. The rind of a Jackfruit will change color from bright green to a dull yellow as it ripens and it may develop dark patches. Inside of the fruit, just beneath the rind are the bright yellow 'bulbs' which make up the edible portion of the Jackfruit. A pithy core runs down the length of the fruit and connects the bulbs to the rind. The fleshy bulbs are 5

11

to 7 centimeters long and triangular. The aroma of a mature Jackfruit has been described as off-putting, similar to overripe fruit. Younger fruit has a sweeter aroma. Jackfruit has a sweet taste and a flavor that is likened to bananas, pineapple and even bubblegum. As the fruit matures, the bulbs become a darker orange-yellow and the taste gets sweeter.

NARANJILLA

Variety/Type Descriptions

Solanum quitoense The round naranjilla fruit grows to 2.5 inches and has a smooth, leathery peel that resembles a small orange when ripe. Until it reaches ripeness, the fruit is covered in thick brown hairs, which gives it a slight resemblance to a kiwi fruit. The hair can then be easily rubbed off when the fruit has properly ripened. The flesh of the naranjilla is light yellow-orange with a large ring of juicy green pulp and small, thin seeds.

ORANGE

Variety/Type Descriptions

Citrus cinensis (Ecuadorian type) –

It is a nearly round fruits, which have leathery and oily rinds and edible, juicy inner flesh. It is orange or yellow when ripe, the inner rind is white, spongy and non-aromatic. The pulp yellow, orange or more or less red, consists of tightly packed membranous juice sacs enclosed in 10 to 14 wedge-shaped compartments which are readily separated as individual segments. In each segment there may be 2 to 4 irregular seeds.

PAPAYA

Variety/Type Descriptions

Carica Papaya – common commercial cultivars generally produce fruits that weigh 0.5 to 2.25 kg (1 to 5 lbs)—and have a thin but tough waxy skin. Green fruits contain latex, which disappears as the fruit ripens to light or dark yellow. The flesh of the fruit varies from yellow to orange to red, and is thick and juicy, with a central cavity filled with many small black seeds. Papayas, which are high in vitamins A and C and calcium,

16

are often used fresh in fruit salads and desserts, as well as prepared in juices and jams or dried.

PASSION FRUIT (MARACUYA)

Variety/Type Descriptions

Passiflora Edulis – also known as passion fruit is a pepo, a type of berry, round to oval. The outside color of the berry ranges from dark-purple with fine white specks to light yellow either yellow or dark purple at maturity, with a soft to firm, juicy interior filled with numerous seeds. The fruit is 4-7.5 cm in diameter; purple fruits are smaller, weighing around 35 grams, while yellow fruits are closer to 80 grams. The smooth, leathery rind is 9–13 mm thick, including a thick layer of pith. Within the berry, there are typically 250 black seeds, each 2.4 mm in length.

Each seed is surrounded by a membranous sac filled with pulpy juice. The flavor of the juice is slightly acidic and musky.

YUCA

Variety/Type Descriptions

Manihot Esculenta – The starchy flesh of the yuca root is a light white or cream color with a grainy texture similar to potatoes. The meaty flesh is often described as having a mild, sweet, somewhat nutty taste. Yuca is high in carbohydrates and low in saturated fat, cholesterol and sodium. It is a good source of manganese and vitamin C. You can prepare it in the same way you would a baked potato, though it's important to remove the skin first.
